The chart displays the distribution of two species, Halodule (green) and None (dark red), across various stations (0 to 100) over time (October 2002 to October 2005). The Y-axis is labeled 'Date' and the X-axis is labeled 'Station'. The size of the bubbles represents the magnitude of the data. Halodule is the dominant species across most stations and dates, while 'None' is observed at specific stations and dates, particularly in the early 2000s.

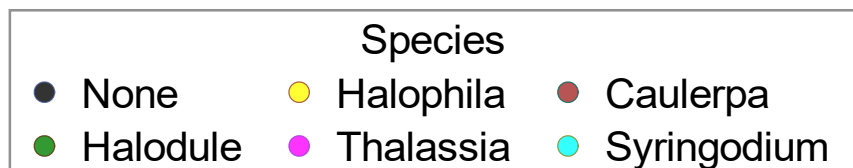

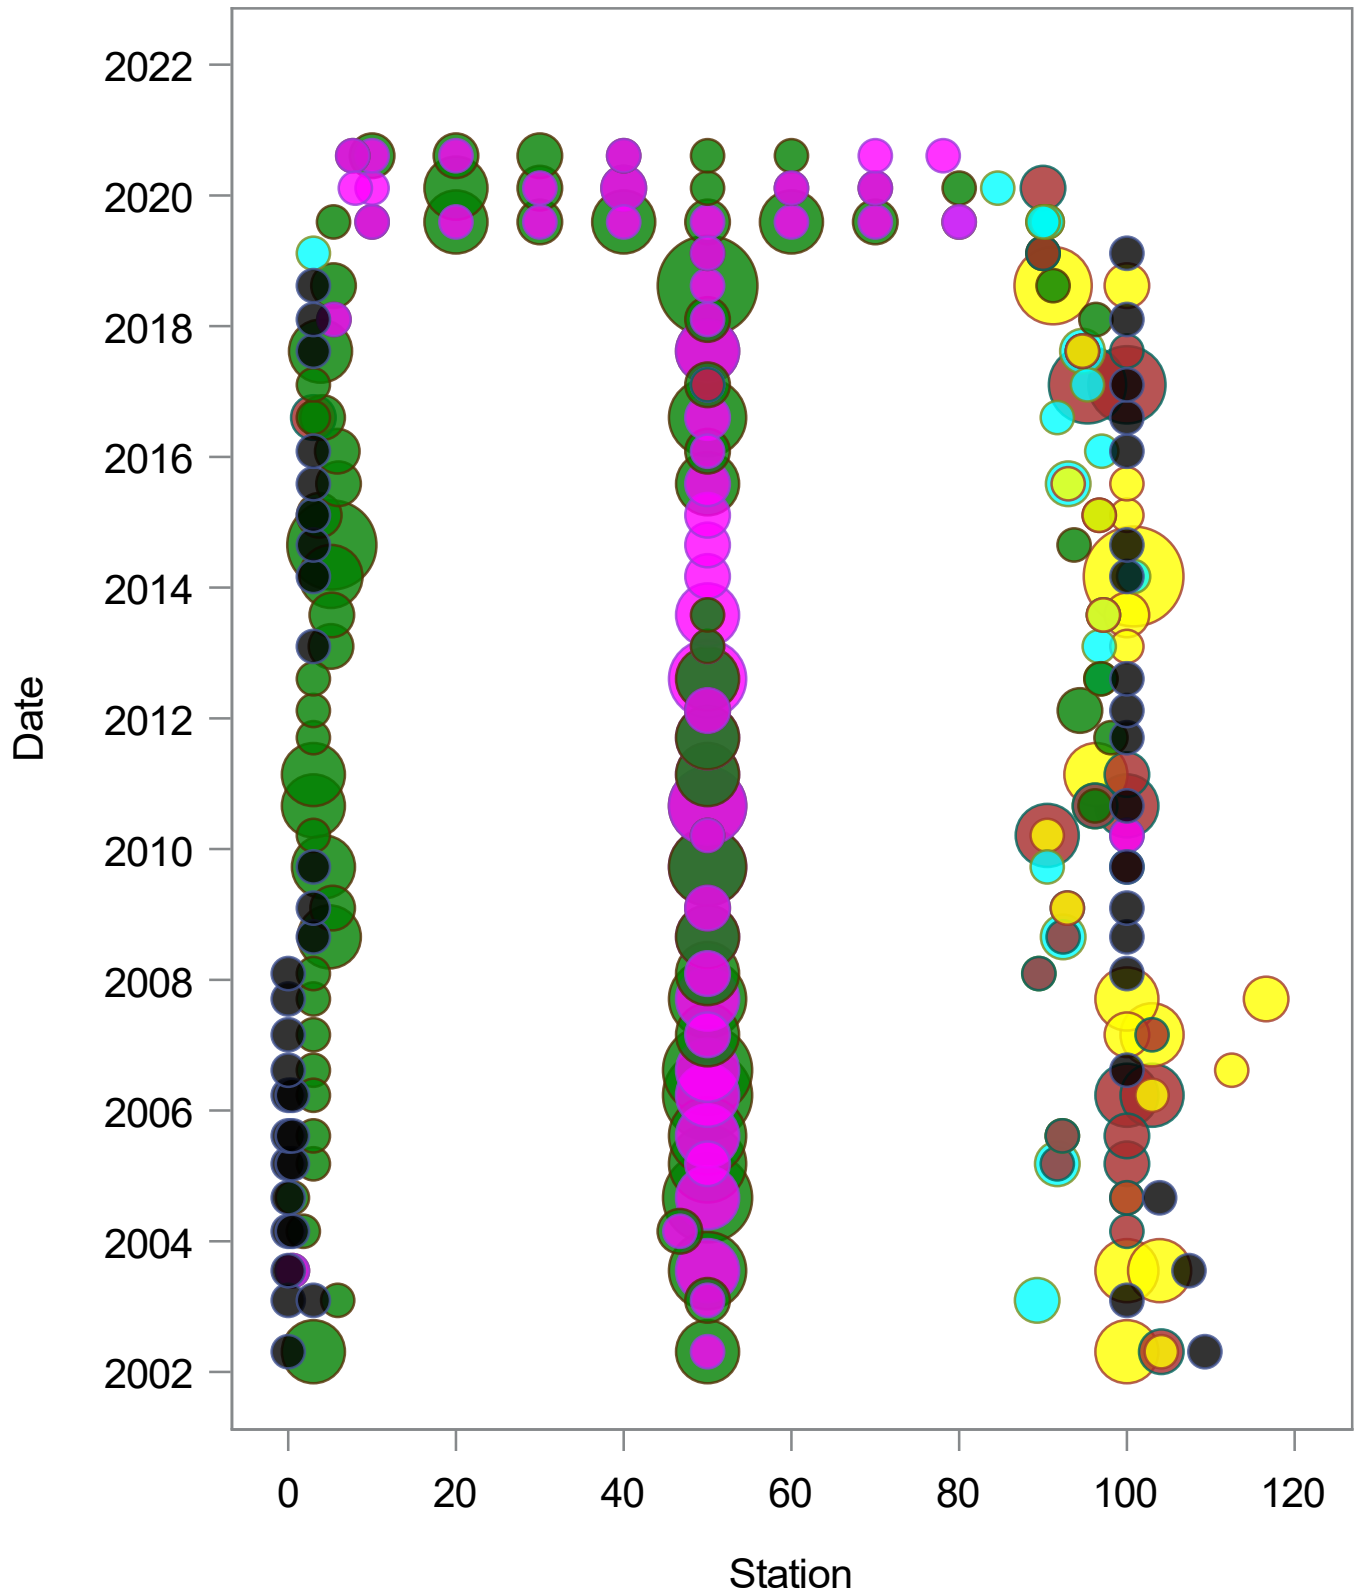

| Date | Station | Species | Magnitude (approx. bubble size) |
|---------|---------|----------|---------------------------------|
| Oct2005 | 0 | None | Small |
| Jul2004 | 0 | Halodule | Large |
| Jul2004 | 10 | Halodule | Medium |
| Jul2004 | 20 | Halodule | Large |
| Jul2004 | 30 | Halodule | Large |
| Jul2004 | 40 | Halodule | Large |
| Jul2004 | 50 | Halodule | Medium |
